

Jaedon Linen

Junior Data Engineer | jaedonlinenimp@yahoo.com | (678) 523-3869 | Marietta, GA

SUMMARY

Junior Data Engineer with hands-on experience in building data lakes, data warehouses, ETL pipelines, and analytics solutions using AWS Glue, Redshift, and S3. Back with a strong foundation in software engineering and cloud architecture with proven ability to deliver business-ready data for reporting, analytics, and decision-making.

EDUCATION & CERTIFICATIONS

Kennesaw State University, Kennesaw, GA <i>Bachelor of Science in Software Engineering with a minor in Computer Science</i>	May. 2025
Amazon Web Services Certification <i>AWS Certified Data Engineer – Associate</i>	Sept. 2025

SKILLS

Programming Languages/Libraries: Python, Spark, Delta Live Tables, Flask, SQL, Git, C#, Java
Applicational: AWS Redshift, Databricks, AWS Lambda, AWS Glue, AWS Athena, AWS EKS, AWS Kinesis
Transferable: Data Cleaning, Data Modeling, Automation, Data Governance, Unit Testing, ERP, SAP

PROFESSIONAL EXPERIENCE

Digital Manufacturing Analyst Internship/Co-op - Smurfit WestRock <i>Atlanta, GA</i> - Built and managed ETL pipelines in AWS Glue to transform OLTP data into OLAP models, improving data usability for analytics and reporting. - Developed custom materialized view queries in AWS Redshift to optimize performance and deliver tailored reporting for individual business units, reducing query time and improving accessibility of plant and mill-level insights.	May. 2024 – Aug. 2025
IT Data Analyst Internship - Republic National Distributing Company (RNDC) <i>Atlanta, GA</i> - Analyzed and validated millions of supplier and consumer records in the RNDC database to ensure data completeness and accuracy. Leveraged Oracle SQL for querying and Excel for reporting, supporting the company's initiative to migrate its data infrastructure to the cloud.	May. 2023 – Aug. 2023

PROJECTS & INITIATIVES

Banking Data Pipeline – Customer 360 Data Lake on AWS - Designed and implemented a Customer 360 Data Lake on AWS as a personal project, simulating banking data across checking, credit cards, loans, and investments to create a unified golden customer record. - Built ETL pipelines in AWS Glue and Spark to ingest data into Amazon S3, applying schema standardization, deduplication, and identity resolution techniques to ensure accuracy and consistency. - Connected the Customer 360 master table in Amazon Redshift to Power BI for reporting, enabling Relationship Manager-style dashboards with insights into spending, savings, and debt.	Aug. 2025 – Sept. 2025
Data Engineering – Data Lake Architecture & Pipeline Development - Built a scalable Azure Data Lake using the Medallion Architecture, designing a star schema and implementing Bronze, Silver, and Gold layers in Azure Databricks with SCD Type 1 and Type 2 to ensure accurate historical and current data. - Automated an end-to-end pipeline with Azure Data Factory to orchestrate data ingestion, transformation, and upserts, delivering clean, reliable datasets for downstream analytics in Power BI.	Jun. 2025 – Jul. 2025
